RES POLYTECHNIC, BANGALORE-91

CIE Practice Test II

Program	Computer Science and Engineering		Semester- III
Course Name	System and Network Administration		Test II
Course Code	25CS34I	Duration- 180 min	Marks-50
Name of the Course Coordinator: Vinay Kumar			

Questions	CO	Marks
1. You are the lab technician of a computer lab. A new desktop PC has arrived and has to be made ready for students. Complete the following tasks and document each step in your observation book: a. Identify the front and rear panel ports, internal components, storage devices, cables and connectors of the PC cabinet and note them in a table. b. Unmount the SMPS, identify its output connectors and wire colour codes, and measure the output voltage levels using a multimeter. Mount it back and test the PC. c. Using the CPUID CPU-Z tool, record the CPU, cache and motherboard details of the system. d. Open the BIOS/UEFI settings, view the system information, and change the boot order so that the pen drive boots first. e. Install Windows 10/11 (or any Linux OS) from the bootable pen drive and document the installation procedure. f. Using Command Prompt/PowerShell, create a new user account named CSE_LAB2_01 with a strong password, and verify it by logging in. g. Check the system performance using Task Manager and Resource Monitor and note down the observations. **Scheme of assessment** a) Identification and documentation of hardware components - 10 b) SMPS voltage measurement, CPU-Z details and BIOS/UEFI settings - 10 c) Installation of OS and related operations - 15 d) User account creation and performance check - 10 e) Portfolio Evaluation - 05 **Total Marks 50**	1, 2	50
